Magnum Force™ Weights

Part #40-144

- 3 - Clutch Weights (57g empty, 64.8g fully loaded)
- 18 - Set Screws (1.2g ea.)
- 4 - Lock Sets (0.6g ea.)
- 1 - T-Handle Allen

Weights can be adjusted by adding or subtracting set screws to achieve desired peak RPM. When using 1 or more set screws a lock set **MUST** be used. **Maximum 6 set screws and one lock set per weight.**

Adding Set Screws:

With the cup point of the set screw pointed into the weight, use the T-Handle Allen wrench to drive set screw in until it bottoms out in the weight. Add the desired number of set screws, bottoming each one to the other. Then drive in lock set until it bottoms on the set screw and tighten it up to lock in place.
